ANTIFOG

Techmer PM's antifog additives can help improve shelf appeal by decreasing the surface energy of your packaging.

The additive helps reduce the contact angle of water droplets, allowing them to spread more evenly and creating a uniform layer.

This will also improve the transparency and light transmission of the end product.

Techmer PM's antifog additives can be used for various applications in cold and hot environments.

*Please consult with a Techmer PM technical service representative to determine specific application limitations.

APPLICATIONS

- Food Packaging (prepared salad, packaged rotisserie chicken, etc.)
- Agricultural Film

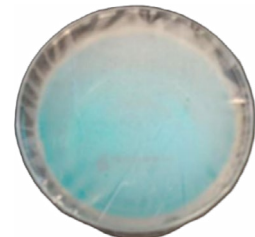

BENEFITS

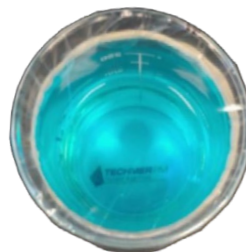

- Suitable for food contact
- Long shelf life without haze or blemishes in end product
- Improved clarity of packaging
- Reduced spoilage/burning
- Increased perception of quality
